CASE STUDY

# Case Study — Kestrel Logistics UK

## From depot spreadsheets to real-time insight

### The challenge

Kestrel operates 34 depots across the Midlands and the North. Performance reporting depended on a small central team and hundreds of spreadsheets. Kestrel wanted to grow data skills from within, particularly among warehouse supervisors and early-careers recruits.

### The solution

- Data Foundations (Level 3) for supervisors moving into analyst roles; Data Analyst (Level 4) for the central reporting team.
- Evening workshop options for shift workers and coaches who understand logistics.
- Kestrel now also gives part of its levy, by transfer, to two haulage subcontractors.

### The results

| | |
|---|---|
| Leavers achieving in 2025/26 | 17 of 19 |
| Apprentices on programme | 41 |
| Merit or distinction at EPA | 57% |
| Reporting time saved | c. 1,900 hours per year (Kestrel estimate) |

**Kestrel end-point assessment grades since 2023**

| Grade | Results |
|---|---|
| Pass | 10 |
| Distinction | 7 |
| Merit | 6 |

### What's next

A second Data Foundations cohort is planned for early 2027, funded by levy transfer to one of Kestrel's subcontractors.
