CASE STUDY

Case Study — Halden Valley NHS Foundation Trust

Building a data-confident Trust

The challenge

Halden Valley NHS Foundation Trust employs more than 7,000 staff across two hospitals in the North West. In 2019 the Trust's performance team relied on manual reporting, and ward managers promoted from clinical roles had little formal management training. Levy funds were expiring unused.

The solution

- Data Analyst and Data Foundations apprenticeships for the performance, finance and clinical audit teams.
- Team Leader and Operations Manager apprenticeships for newly promoted ward and department managers, timed around rota patterns.
- Workplace projects agreed with the Trust's Chief Information Officer, using anonymised data under the Trust's information governance rules.

The results

Halden Valley apprentices by programme

Programme	Apprentices since 2023	Achieved	On programme
Working Smarter with AI	25	10	13
Data Analyst	21	7	12
Data Foundations	14	6	8
People Professional	8	1	6
Business Analysis	8	4	4
AI & Automation Practitioner	8	3	4
Team Leader	7	1	4
Operations Manager	7	5	1

Achieved in 2025/26	26 apprentices
EPA distinctions	11
Theatre utilisation	Up from 76% to 84% after the dashboard went live (Trust figures)
Hours saved	c. 2,600 hours of manual reporting per year

What's next

The Trust is exploring an AI & Automation Practitioner cohort for its corporate services teams and a Data Engineering pathway for its new shared data platform.
